### Current Enzyme Inhibition

ISSN 1522-4032

**Current Enzyme Inhibition** aims to publish all the latest and outstanding developments in enzyme inhibition studies with regards to the mechanisms of inhibitory processes of enzymes, recognition of active sites, and the discovery of agonists and antagonists, leading to the design and development of new drugs of significant therapeutic value. Each issue contains a series of timely, in-depth reviews written by leaders in the field, covering a range of enzymes that can be exploited for drug development. **Current Enzyme Inhibition** is an essential journal for every pharmaceutical and medicinal chemist who wishes to have up-to-date knowledge about state and every development in the study of enzyme inhibition.

- ☐ Current Regulation Concepts of Zinc Metalloproteinase Involvement in Blood Pressure Regulation  
pp. 29-42(14)  
Author: Giuseppe A. Sparacino; Paul Cantipally
- ☐ Role of Caspase-1 in Activation-Induced Cell Death of Neurons  
pp. 43-50(8)  
Author: Ayman S. Sult
- ☐ ACE2 and ACE are the closest  
pp. 51-63(13)  
Author: M. C. Thorne; C. T. Thorne
- ☐ Inhibition of Dipeptidyl Peptidase-4 (DPP-4) - A Novel Approach to Treat Type 2 Diabetes  
pp. 65-79(15)  
Author: Bo Ahren
- ☐ Translating MAPK Inhibitors To Anti-Inflammatory Compounds  
pp. 75-84(10)  
Author: C. Alessi
- ☐ Monomelic Oxidase Inhibition in the Light of New Structural Data  
pp. 85-93(11)  
Author: M. Reyes-Fernandez; A. Flores; P. Montiel-Vazquez; D. R. Gonzalez
